DreamCode Interactive Temporarily Suspends Online Services During Security Review

BUCHAREST, ROMANIA — DreamCode Interactive has temporarily taken DreamCode Hub and DreamCode Cloud offline while the company investigates unusual network activity detected across parts of its infrastructure.

To our valued players, partners, and community members,

Over the past 72 hours, our monitoring systems have identified activity that requires further investigation. As a precaution, we have restricted access to several of our online systems while our security and infrastructure teams work to determine what happened and make sure the affected services are safe to bring back online.

This is a precautionary measure. At this time, we have found **no confirmed evidence that personal information or financial data has been compromised.**

What is currently unavailable

DreamCode Hub

DreamCode Hub is temporarily offline. While the service is unavailable, users cannot:

- Make new purchases
- Redeem game keys
- Download games or installers
- Download title updates
- Use storefront-related account features
- Access certain authentication services

DreamCode Cloud

DreamCode Cloud has also been taken offline. Cloud gaming sessions, streaming, remote game access, and related services are currently unavailable.

Any active cloud sessions were terminated as part of the shutdown.

Installed games

Games that are already installed on your PC, console, or supported local device are **not affected by this shutdown**.

Local game files and local saves remain available. Previously validated offline licenses will continue to work where supported by the individual game.

Games or features that require an online connection may remain unavailable until our services are restored.

User data and security

Our investigation is still ongoing.

Our teams, together with cybersecurity specialists, are reviewing server activity, access logs, authentication systems, database access, and network infrastructure. We are also rotating security certificates, reviewing credentials, and adding additional network controls before external access is restored.

At this point, we have **not confirmed a breach of sensitive personal or financial information**. If that changes, we will notify affected users and provide further information.

The Magic Button 2 delayed

The current situation also affects our release schedule.

The Magic Button 2 was scheduled to launch on **September 29, 2026**. That release is now postponed.

We will not distribute the game until our build and deployment systems have been checked and confirmed to be secure. This means the game may be ready from a development standpoint, but we do not consider it appropriate to release it through infrastructure that is still under investigation.

We will announce a new release date once the network and deployment environment have been fully cleared.

Restoring our services

We are currently working through four stages:

1. **Investigation and containment** — identifying the source of the unusual activity and checking affected systems.
2. **Infrastructure security** — strengthening network controls and separating critical systems where necessary.

3. **Internal testing** — testing Hub, Cloud, authentication, and related services in a controlled environment.
4. **Gradual restoration** — bringing services back online in stages once they have passed security and stability checks.

Our current target is to have **DreamCode Hub and DreamCode Cloud fully restored by October 1, 2026.**

That date is a target, not a guarantee. If additional issues are found during testing, we will keep services offline until they are resolved.

We know this is inconvenient, particularly for players who rely on DreamCode Hub and DreamCode Cloud every day. We would rather take the time to properly investigate the situation than bring services back online prematurely.

We will provide further updates as the investigation and restoration process progresses.
